ASI Schema

Version Control Procedure

Version:	1.0
Issued:	30/09/2013
Status:	Draft
Author:	Kieran Hackshall

Table of Contents

1. PURPOSE & SCOPE	3
2. PROCEDURE	3
2.1. Schema Register	3
2.2. Change Request	3
3. APPENDIX A - DISTRIBUTION LIST	3

1. Purpose & Scope

This document describes the Version Control Procedure to be used for the ASI message standards.

2. Procedure

The following describes the steps necessary to submit, review and modify schemas contained within the ASI messaging suite.

2.1. Schema Register

A register of ASI schema changes and versions is to be located on the ASI Steel IT Systems member site:

ASI Schema Change Request and Version Register (PDF)

at <http://steel.org.au/asi-committees/steel-it-systems-group/>

All requests for change and version numbers relating to ASI schemas are to be managed via the ASI Schema Change Request and Version Register.

2.2. Change Request

A request for change to the ASI schema will be made by filling out an ASI Schema Change Request located on the ASI Steel IT Systems member site:

ASI Schema Change Request (Word doc)

at <http://steel.org.au/asi-committees/steel-it-systems-group/>

The Schema Change Request should be filled out with relevant detail and named in the form of 'ASI_SchemaChangeRequest_[change request number].doc' and sent to ianc@steel.org.au.

Change requests will be sent out to the ASI working group for review no later than one week before the next scheduled working group meeting. Requests submitted within less than a week will be discussed at the following working group meeting.

2.3. Modification of Schemas

Once a change has been ratified by the working group the BlueScope Business Integration team will carry out modification to the schema and update the ASI_SchemaChangeRequest&VersionRegister.xls with corresponding version detail. Further the team will upload the amended schema to the ASI Steel IT Systems member site as well as upload to their CVS repository.
